

Secure and Manage User Interactions and Connections across SaaS applications

Together, BetterCloud and Okta create the foundational layer of security across your digital workplace with secure authentication and automated remediation policies for security risks within applications. Okta handles users' identity across all applications, while BetterCloud monitors users' interactions and enforces policies for entitlements, configurations, sharing settings, and user activity across SaaS applications.

Benefits of Connecting Okta with BetterCloud

-  Enhanced visibility to user data, activity, admin settings across apps
-  Improved security by automating the entire user lifecycle process
-  Reduced resolution time with automated policy enforcement

Extend the Power of BetterCloud

Managing the granular settings and configurations of SaaS applications through multiple admin consoles and custom scripts ultimately leads to silos, broken processes, and security threats. Save time and eliminate security vulnerabilities by enforcing and remediating policies across all of your applications. Use BetterCloud as the central policy engine and extend IT & security workflows to all of the applications that power your organization.

Featured Connectors:

CORE USE CASES

Modernize IT: Comprehensive Offboarding Policies

Pairing BetterCloud with Okta automates the entire offboarding process across SaaS applications, taking actions like transferring a user’s files, blocking email forwarding, and waiting a set duration of time before deleting licenses. By retaining critical data and fully eliminating access to it, your organization safeguards intellectual property and complies with regulations.

Secure, Seamless Experience: Security & Control for Content Collaboration

Stay informed of security blind spots and view trends in policy violations to better understand and address user behavior. BetterCloud’s extensive alerts gives admins the insights needed to take one-off or create automated remediations. BetterCloud’s dashboard centralizes data from multiple SaaS applications and includes intel on which policies are being violated the most, number of times a policy has run, and data security.

Prevent Data Breaches: Automated Policy Enforcement

BetterCloud continuously monitors your SaaS environment for policy violations, such as users downloading an excessive number of files or failed logins. When a policy violation occurs, BetterCloud can automatically trigger a custom response to remediate the threat in the affected SaaS application, or trigger action in Okta to suspend the user’s access to all applications.
